bespoke
software

On behalf of our client, Bespoke Software, a leading software development company, we are seeking a talented, experienced individual for the position of Business Intelligence Developer.

Duties & Responsibilities:
The Business Intelligence Developer will work in a small team on end-to-end business intelligence solutions primarily using the Microsoft SQL server toolset. This position will involve providing consulting services including requirements gathering, development, testing and supporting Business Intelligence solutions. This individual may also be required to mentor more junior staff from time to time.

Minimum Skills, Qualifications & Experience
- University Degree in Math or Science and Technology based subject.
- At least 3 years of experience in developing Business Intelligence or Data Warehouse solutions using the Microsoft SQL Server tool set (T-SQL, SSIS, SSRS, SSAS)
- Good understanding of Data Warehouse design and Relational database
- Excellent interpersonal skills, both written and verbal
- Experience mentoring or training staff
- Ability to work in small team and multi-task with a variety of clients

Advantages
- Re/Insurance and Financial institution knowledge
- Working knowledge of MDX
- Dundas Dashboards
- Microsoft certification
- Experience with Agile methodology
- SharePoint
- Covey thinking

Bespoke software prides itself on delivering high quality Business Intelligence solutions to our clients and is seeking a candidate that shares these values. Bespoke uses Agile methods, our teamwork is based on win/win philosophies and we reward well.
