

Scalable technology solutions

## Open Source Risk Management Consultant

Onxis designs and manages infrastructure on Bermuda based cloud platforms. We support Infrastructure as a Service (IaaS) and offer ideas on how best partition it between public/private cloud service providers or privately in your own environment. Since 2010, we have helped design and build scalable, high performance, IaaS that supports a wide variety of businesses across the island.

Onxis manages physical and virtual infrastructure for clients and helps them capitalise on cloud computing advances. Onxis also offers comprehensive IT maintenance and risk management contracts for server and desktop support. An opportunity exists for a qualified **Open Source Risk Management Consultant** to join the team.

Interested candidates must have proven expertise in the following:

### Experience & Skills

- 10+ years' experience working in the reinsurance industry creating software to help with risk simulation, risk analysis and data mining.
- 10+ years working with open source software.
- Solid understanding of the open source development methodologies and practices.
- A thorough understanding of free software culture.
- 10+ years' experience working in communications security.
- Advanced understanding of cryptography, public key infrastructure, computer security and cyber risk.
- Thorough understanding of state of the art computing platforms and ability to solve seemingly intractable problems using innovative distributed compute systems

### Proven leadership in transformation, innovation and collaboration

- 10+ years management experience in the IT field, driving innovation, fostering collaboration and mentoring staff.

### Building IT systems that evolve naturally over time

- Ability to design complex IT systems that can grow in line with new technologies as they emerge. Ability to avoid lock-in to specific technologies. Using open source so that organisations can manage their own software development risk.

### Migrating to new platforms while keeping the train running

- Ability to keep legacy systems running and migrate to new, more powerful systems whilst keeping existing critical systems running and re-using code where appropriate.
- 10+ years' experience of cross platform computing and how to integrate systems running on different platforms.

### Data Analysis

- Ability to use knowledge from multiple fields, such as science, IT, statistics, mathematics, language and cryptography, in order to perform complex data analysis.
- Ability to build models based on small datasets as well as large.

Please apply no later than **February 13<sup>th</sup> 2015** to:
