

“The provision of a robust and reliable water and wastewater service to all islanders and visitors, in a way that will allow Bermuda to be recognized as a leader in sustainability.”

Strategy for Sustainable Water and Wastewater Servicing in St. George’s Parish

The Study

The Government of Bermuda, Ministry of Public Works, has initiated a study to formulate a strategy for sustainable water and wastewater servicing in St. George’s Parish. The objectives of the project involve an information review of the current water supply and sewage systems in St. George’s Parish, to establish appropriate policies in order to:

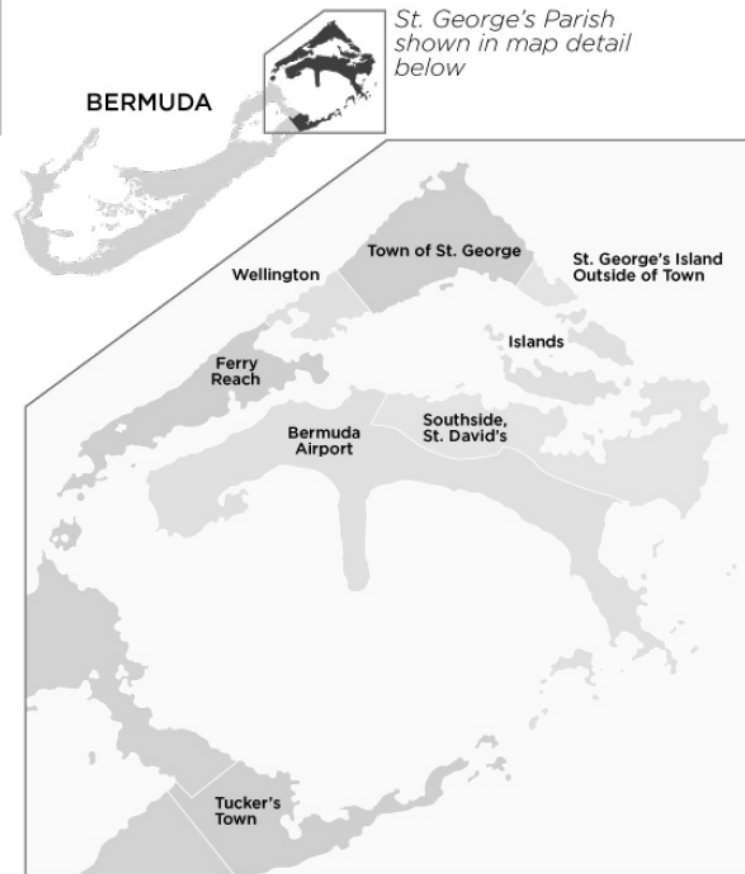

- Offer options for management of service delivery;
- Identify infrastructure investment required to deliver a sustainable service for the Plan Period (25 years); and
- Complete a financial analysis of the current and proposed service delivery systems.

The Process

The study will define existing constraints and capacities, consider and evaluate alternatives and identify preferred water and wastewater servicing alternatives. The methodology will follow a process similar to the master planning process of the Municipal Engineers Association of Ontario, Canada.

Public Information and Consultation

The government wishes to ensure that anyone with an interest in this study has an opportunity to be involved and to provide input. Opportunities to provide the public with information will be made available via Public Information Centers (PIC’s) and Town Hall meetings as well as on the project website, found here: www.bermudawater.info. The government is urging St. George’s businesses and residents to answer the short survey found at the listed site. If you have any suggestions for or comments on the study please send any email to the project website: stgeorgewwwplan@gov.bm.
