

We are currently seeking applications from qualified, certified and motivated individuals who have the relevant development experience for the position of:

Software Engineer

Candidates must have post-school education in a technology-related field and at least five (5) years of experience in commercial application development, using Visual Studio, C#, and ASP.NET or MVC. Experience of development using Telerik controls would be beneficial, and SharePoint expertise or certification would be distinct advantage. Candidates must be analytical and have a passion for technology solutions and customer service. They should be professional, ambitious and self-motivated and be comfortable working in a close team environment.

A strong working knowledge of SQL Server (primarily 2005 – 2014) is required, including Reporting Services and Integration Services. Candidates also need a robust understanding of SQL, as database design and creation is part of the role. This includes the development of stored procedures, indexes and triggers, and the ability to optimize database queries.

Excellent communications skills are mandatory as the job involves perpetual learning via on-the-job training and working closely with our customers. Responsibilities will include support and maintenance of existing systems, business requirements analysis, database and application design, programming and testing of new systems.

Candidates must have attained the Microsoft Certified Solutions Developer (MCSD) qualification, preferably with a Microsoft Certified Solutions Associate (MCSA) qualification in Web Applications development, to help us maintain our Microsoft GOLD Application Development status. Continued education in software development and project management will be available as required.

An excellent salary and benefits package will be offered to the successful candidate. Applications, in writing only, accompanied by a resume and references should be forwarded to:
