

Aecon Airport Constructors Limited is currently recruiting for a **Quality Control and H&S Manager** for Metal Cladding. This role includes to assure implementation of QC and H&S plans, perform testing and inspections as required, preparation and implementation of preparatory meeting before starting any new construction activity.

Quality Control and H&S Manager (Metal Cladding)

Responsibilities:

- Maintaining the daily log reporting on-going activities and to assure and supervise compliance with the contract requirements
- Rejection of non-compliance work and/or equipment
- Attend weekly progress meetings and implement the quality control and assurance program for cladding works
- Perform ongoing surveillance/monitoring and auditing of the quality control program
- Control and coordination of Non-Destructive Examination (NDE) contacts
- Perform daily inspection of works and ensure testing and approval of all materials prior to use
- Maintain a testing log showing status of all tests and inspections performed
- Red-Flag and bring to the attention of the Client's Quality Manager and Project Engineer any segment of work, which does not comply with the specification
- Ensure field and laboratory testing is carried out according to inspection and test plans
- Ensure calibration of laboratory testing equipment and concrete batch plants
- Provides advice, training and performance management of workers on site from a quality perspective
- Monitor snagging towards project completion and ensure all non-conformities are addressed prior to handover
- Collating quality documentation for final handover to Client
- Participate in third party audits
- Ensuring that the Project is in full compliance with government and lenders regulations and obligations and that a safe workplace is provided for employees
- Assist in identifying risks and ensure that appropriate control measures are put in place to reduce risk
- Assist with emergency planning and response process
- Development, implementation, communication, monitoring and improvement of H&S plans and programs

Education and Training:

- Civil and/or construction engineer with experience working in a façade/cladding based QA/QC role
- Recognized Quality Control management training and certification
- OSHA H&S officer certified training
- Degree in a technical discipline such as Construction Engineering or related fields
- Experience of auditing and managing a 9001 Management System
- Strong business writing and communication/interpersonal skills
- At least 5 years continuous experience in a similar role and on projects of similar size and complexity
- Computer literate with Excel, Word and construction project management software

Interested persons should apply in writing no later than September 26th, 2018 to:
