

Corporate Applications Manager

Information Technology

Employment Opportunity

**Application
Deadline:**

Wednesday
August 11, 2021

The Corporate Applications Manager oversees the design, development and implementation of systems solutions. Working closely with all business units, determines system requirements and leads the resulting projects to enhance and/or develop existing Liberty systems or select/ implement new systems. The role's primary accountability is to serve as a trusted advisor and partner to business units, to create and deliver IT initiatives which align with the strategic imperatives of the respective business units. The role requires in-depth experience with enterprise applications for these disciplines in a large, complex multi-site corporation.

Key Responsibilities

- Provide business and technical guidance to the business units with the intent to optimize and streamline the technology and functional processes supporting these business units
- Lead and management a team of employees, contractors and vendors in support of relevant business systems
- Provide business and technical guidance to the business units with the intent to optimize and streamline the technology and functional processes supporting these business units
- Collaborate with the business unit, vendor partners and IT colleagues in examining solution options and planning systems deployment, maintenance and enhancement projects that are in line with the strategic direction defined by the business unit and IT
- Lead the vendor evaluation selection process for business units (outside of operations) to include development of requests for proposal, vendor evaluation & selection, and coordination with the Project Manager
- Lead local application strategy to align with Liberty's customer first program, corporate suite of products and application strategy.
- Analyze business requirements, costs and benefits, project needs and determine resources needed to meet objectives through formal business cases and project charters
- Formulate and participate in business units governance activities to ensure project costs and schedules are properly controlled, also while ensuring execution as defined by the roadmap
- Management of the corporate application budget
- Evaluate existing applications and platform and provide recommendations for system enhancements by conducting gap analysis, identifying feasible alternative solutions, and assisting in the scope of modifications
- Work in a hands-on manner with internal business unit stakeholders to align technology solutions with business needs and strategies
- Act as a bridge between local business requirements, to address and incorporate business efficiencies and regulatory considerations into the business strategy
- Create functional strategies and specific objectives for the Corporate Applications functions
- Oversee the change review and approval process with technical teams and business stakeholders to ensure that all impacted systems, subsystems and functions are aware of proposed change(s) and engaged with the review/approval process and develop budgets, policies, procedures to support the functional infrastructure
- Liaise with Liberty Group and subsidiaries' employees, other IT professionals, vendors and external consultants in a timely manner to discuss or resolve application or data issues

Supervisory Responsibilities

- The Corporate Applications Manager leads a team of, Business / Application Analysts, Data Integration Analysts, Application developer and Web/SharePoint Developer

Knowledge, Skills and Abilities

- Exceptional organizational and planning skills, analytical abilities, problem solving, and follow through
- Commitment to excellence in service, performance, and execution
- Ability to develop strong working relationships with business leaders at all levels
- Demonstrated leadership with proven ability to manage, grow and develop strong IT application teams and individuals
- Exceptional project planning & management skills; experience in organizing, planning, and executing significant projects from vision through implementation leveraging structured systems development and project management methodologies
- Excellent written, presentation and verbal communication skills with technical and non-technical audiences; ability to present and discuss technical information in a way that establishes rapport, persuades others, and promotes understanding by not overcomplicating
- Experience with the Utilities sector would be beneficial

Education and Experience

- University degree, preferably in Computer Science or equivalent education and experience
- Project Management (PM) designation
- Minimum of 6 years PM experience managing complex IT projects (full life cycle)
- Proven project management skills (e.g. must have successfully managed multiple projects from inception to completion), particularly related to resource and risk management.
- Experience working with implementing and managing ITSM Change Management methods
- Experience working with enterprise packaged applications
- 3-5 years of practical experience managing projects, implementing ERP, CIS and EAM systems and defining business requirements using processes and methods including but not limited to ITIL, PMI, RUP, and Agile
- Significant experience leveraging strong technical, analytical, problem-solving and conceptual skills within Information Technology disciplines such as software engineering, design and development, package solution evaluation/selection and implementation, application integration, and business process re-engineering
