

Environmental Engineer

Friday,
April 22, 2022

If you are committed to service excellence and have the relevant experience, we invite your application for the above position.

The Environmental Engineer is responsible for assisting and advising on all matters related to environmental aspects of major projects, ensuring the compliance with local and international environmental standards, regulations, and legislation, including ISO-14001.

Responsibilities include but are not limited to:

- Provide engineering support and solutions for environmental aspects of major projects, including Environmental Impact Assessments and Construction Environmental Management Plans; Liaising with coordinating specialist engineering colleagues, consultants, governmental agencies, and vendors as required.
- Prepare technical reports in support of assessment findings, recommendations, and design solutions.
- Prepare engineering designs, including drawings, cost estimates and schedules.
- Develop and manage projects from initiation through to closure, including planning applications, preparation of tender documentation and evaluation of tenders.
- Supervise and commission assigned projects and ensure proper project hand over, including as-built documentation and occupancy certificates.
- Assess current environmental policies and procedures and identify opportunities for improvement.
- Keep abreast of current local and international environmental engineering standards, trends, technologies, and continually bring leading edge solutions for civil/structural issues.
- Support training and development of employees.
- Provide support as needed to any areas within IEPC.

Key Qualifications/Abilities

- Bachelor of Environmental or Chemical Engineering from a recognised university or equivalent qualification.
- Registered as a Chartered or Professional Engineer.
- Minimum of five years of experience. In-depth knowledge of applicable engineering codes, standards, and regulations.
- Working knowledge of Government Health & Safety legislation and regulations.
- Knowledge of best industrial practices related to environmental engineering with specific reference to international standards of specifications and technological trends.
