

Application Deadline
Wednesday, April 5, 2023

Electrical Engineer

If you are committed to service excellence and have the relevant experience, we invite your application for the above position.

The Electrical Engineer is responsible for assisting and advising on all matters related to electrical systems, such as electrical distribution, building controls and energy usage.

Responsibilities include but are not limited to:

- Provide engineering support and solutions for new and existing electrical systems
- Liaise with coordinating specialist engineering colleagues, consultants and vendors as required
- Prepare technical reports in support of assessment findings, recommendations and design solutions
- Prepare electrical designs, including electrical drawings, cost estimates and schedules
- Develop and manage projects from initiation through to closure, including planning applications, preparation of tender documentation and evaluation of tenders
- Supervise and commission assigned projects and ensure proper project hand over, including as-built documentation and occupancy certificates
- Keep abreast of current local and international electrical engineering standards, trends, technologies and continually bring leading edge solutions for electrical issues
- Support the training and development of employees

Key Qualifications/Abilities:

- Bachelor of Electrical Engineering from a recognised university or equivalent qualification
- Registered as a Chartered or Professional Engineer.
- Minimum of five (5) years of experience.
- Project Management Professional (PMP) Certification or equivalent would be an asset
- In-depth knowledge of applicable engineering codes, standards and regulations.
- Working knowledge of Government Health & Safety legislation and regulations
- Knowledge of best Industrial practices related to electrical engineering with specific reference to International standards of specifications and technologies trends
- Proven track record of successful projects, excellent project design and project management
- Strong technical, problem-solving, analytical, and Interpersonal skills
- Proven ability to coach, mentor and develop others
- Must be a highly motivated and flexible team player
