

## THE ANSWER

Looking for a viable career opportunity? CCS has THE ANSWER. We are seeking a Senior Network Consultant to join our team.

### Senior Network Consultant

The Senior Network Consultant will provide strategic consultation, solutions architecture and quality assurance along with conducting technical research. The successful candidate will prepare written reports with recommendations and act as project leader, while ensuring incidents and projects are planned and executed according to departmental standards and providing quality assurance.

Responsibilities include:

- Providing level 3 technical support, along with project managing engagements while overseeing quality control
- Participating in strategic consultations, solutions architecture and assuring recommendations can be implemented, in a timely and fiscal manner
- Performing analysis and develop client deliverables appropriate to the specific consulting engagement
- Conducting technical research as necessary, as it relates to new and emerging technical trends
- Candidate must be able to research, analyze and prepare written reports and recommendations as it relates to providing new opportunities and new strategic technological direction
- Depending on project size, supervising other personnel, assigning work, and establishing quality control of work performed by other team members
- Identifying sales opportunities and leads, which may come from meetings, clients, other consultants, Account Managers, vendors and others
- Providing primary technical leadership and escalation for CCS Network team members

Candidates Must Possess:

- Minimum of 7 years of IT consulting as a senior, with a strong technical and business focus on Microsoft solutions, IT Security, and Network Infrastructure, SAN Technologies and CISCO UCS
- Primary certifications relating to designing and implementing advanced Microsoft Server Solutions, VMWare, Cisco, HP and Compellent solutions; (MCITP, VCP, CCIP)
- Extensive experience with file server deployment and centralized management along with desktop management
- Server and Storage Architecture- Expert knowledge of server and storage solutions (including servers, storage, data centre networking, security, experience in architecture assessments, planning and implementation)
- Virtualization Architecture – Expert technical knowledge related to the design, implementation and maintenance of server and desktop virtualization solutions (VMWare, Hyper-V, VDI and XenApp)
- Microsoft Server Solutions – Expert technical knowledge related to the design, implementation and maintenance of the latest releases of MS server solutions (Exchange 2007/10, Server 2007/10, Active Directory, Group Policies).
- Data Centre Network Infrastructure – Strong technical knowledge related to the design, implementation and maintenance of DC network infrastructure(FC, FCoE, iSCSI etc.), preferably Cisco MDS or Nexus
- Excellent communication and project management experience
- Proven experience with system security and compliance
- Proven experience with designing and installing of at least three of the following four; HP, Compellent, 3Par and Cisco SAN solutions
